Summary

AI Engineer and Full-Stack Developer specializing in agentic workflows, LLM systems, automation pipelines, and computer vision. 2x Hackathon winner with hands-on production experience building intelligent AI agents, multi-agent architectures, and scalable backend systems. Proven ability to identify real business problems and deliver end-to-end solutions through intelligent engineering — from prototype to production deployment. Strong collaborator and team leader with experience shipping production-ready AI systems under tight deadlines.

Experience

Crown Solution

Feb 2026 – May 2026

AI & Automation Engineer Intern

- **Problem Solved:** The team was manually performing SEO audits, metadata updates, sitemap checks, and issue detection — a repetitive process consuming 10–15 hours/week per engineer. Fully automated this end-to-end using FastAPI background workers and AI pipelines, reducing manual SEO effort by **80%** and improving team productivity significantly.
- Built automated technical SEO pipelines using FastAPI, PostgreSQL, Redis, and async background workers — replacing manual crawl analysis, metadata generation, and sitemap handling entirely.
- Designed and deployed **cron-based automation** for recurring SEO audits — scheduled jobs ran on set intervals, automatically detecting issues, generating structured reports, and triggering alerts with zero manual intervention.
- Implemented agentic workflow patterns that autonomously executed multi-step SEO task sequences — from crawling to issue classification to fix recommendation — end-to-end without human input.
- Integrated AI models and external APIs for automated SEO content analysis, keyword classification, and intelligent optimization workflow orchestration.

HackVision Hackathon

Jan 2026

2nd Runner-Up | Team Lead & Agent Architect

- Ranked **2nd Runner-Up (Top 1%)** among 200+ teams by building a multi-agent AI workflow automation system under a strict 48-hour deadline.
- Architected modular agent pipelines enabling parallel task execution, autonomous decision-making, and intelligent orchestration.
- Demonstrated strong leadership and problem-solving skills by leading a team of 4 engineers to deliver a production-ready prototype.

Jio Institute x GDG Cloud Mumbai Hackathon

Jan 2026

Thematic Challenge Winner | AI Engineer

- Won the **Thematic Challenge** among 200+ competing teams by developing an LLM-powered intelligent agent system.
- Designed real-time insight pipelines and automated decision support workflows, delivering a production-ready prototype within 48 hours.
- Demonstrated cross-functional collaboration, rapid prototyping, and strong communication skills in a high-pressure competitive environment.

Projects

Lumiqe — AI Color Analysis & Personal Styling Platform

GitHub

Next.js, FastAPI, PyTorch, OpenCV, MediaPipe, PostgreSQL, Groq LLM | Collaborative Project

- Built a production-grade AI styling platform with a 9-step computer vision pipeline (BiSeNet, MediaPipe, K-Means++, Delta-E CIE2000) achieving lighting-invariant skin tone classification across 12 color seasons in under 2 seconds.
- Engineered a real-time in-store Buy/Pass clothing scanner using Delta-E CIE2000 perceptual color matching for instant wardrobe decisions.
- Integrated AI Stylist chat powered by Llama 3.3 70B via Groq; implemented server-side JWT proxy architecture ensuring authentication tokens are never exposed to the browser.
- Shipped full production system with Stripe subscription billing, wardrobe management, price drop alerts, referral system, Redis rate limiting, and i18n support (EN/ES).

TrackML — Particle Track Reconstruction

GitHub

PyTorch, Transformers, PyTorch Geometric

- Built a Transformer-based Graph Neural Network (GNN) for 3D particle trajectory reconstruction on high-dimensional physics data.
- Solved extreme class imbalance (1000:1 ratio) and optimized training pipeline using FP16 mixed precision, improving training efficiency significantly.

- Evaluated model performance using precision, recall, and F1-score; demonstrated strong ML engineering and research workflow skills.

Competitor Analyzer Agent
Python, LangChain, OpenAI API — LLM-based Market Intelligence System

GitHub

- Built an autonomous AI agent system to monitor competitor pricing, features, and market positioning in near real-time.
- Integrated webhooks, SHA-256 content diffing, and LLM-based classification to detect and categorize competitor changes automatically.
- Demonstrated strong skills in AI agent design, API integration, automation pipeline engineering, and strategic insight generation.

Drone Detection System
Python, OpenCV, YOLO — Computer Vision & Real-Time Object Detection

GitHub

- Developed a computer vision detection pipeline trained on a custom dataset of 2,783 images achieving **mAP@0.5 of 0.89**.
- Optimized YOLO architecture for real-time inference achieving **10–12ms** per frame, suitable for live deployment scenarios.
- Demonstrated deep learning, model optimization, and computer vision engineering skills applied to a real-world detection problem.

Skills

Languages: Python, TypeScript, JavaScript

AI & LLM Engineering: LLMs, AI Agents, Agentic Workflows, Multi-Agent Systems, LangChain, LangGraph, CrewAI, RAG Pipelines, Prompt Engineering, Function Calling, OpenAI APIs, Anthropic APIs, MCP Servers, Vector Databases, Embeddings, Fine-Tuning, Local LLMs, Semantic Search, Structured Outputs, AI Evaluation Pipelines, Context Engineering, LLMOps

ML & Computer Vision: PyTorch, Scikit-learn, Transformers, Graph Neural Networks, OpenCV, YOLO, MediaPipe, BiSeNet, Object Detection, Real-Time Inference, Model Optimization

Backend & APIs: FastAPI, Node.js, REST APIs, Webhooks, Async Programming, Authentication Systems, JWT, Redis, PostgreSQL, pgvector

Frontend: React, Next.js, Tailwind CSS, Responsive UI Development

Cloud & DevOps: AWS EC2, Docker, GitHub Actions, Linux, Ubuntu, Deployment Pipelines, Server Management, Cron Jobs, Background Workers

AI Developer Ecosystem: Cursor, Claude Code, GitHub Copilot, OpenRouter, Ollama, Local AI Setups, WSL

Soft Skills: Team Leadership, Problem Solving, Cross-functional Collaboration, Rapid Prototyping, Communication, Deadline-driven Delivery

Other Tools: Git, Stripe, Sentry, Kali Linux

Education

Thakur Shyamnarayan Degree College
B.Sc. in Data Science

Mumbai, India
2023 – 2026

CGPA: 7.8
